SUMMARY

Results-driven QA Engineer with 5+ years of experience delivering automation, quality, and testing solutions for web and desktop applications. Strong expertise in quality engineering, test automation, API testing, and AI-assisted testing, with a proven track record of improving test efficiency and software quality. Effective collaborator experienced in investigating complex defects, driving quality initiatives, and delivering reliable software in fast-paced Agile environments.

CORE COMPETENCIES

- Automation Tools & Frameworks: Playwright, Selenium, Postman, TestComplete, TestNG, REST Assured
- Test Types: Functional, Regression, Integration, API, UI, E2E, Accessibility, Security, Performance
- Languages: TypeScript, JavaScript, Java
- CI/CD and DevOps: GitHub, GitLab, Podman, Docker, Jenkins
- Test Management: Jira, Xray, Bugzilla, Confluence
- Cross-Platform Testing: Windows, macOS, iOS, Android
- Database Tools: Oracle SQL Developer, pgAdmin
- AI-Assisted Testing: Cursor AI, MCP Servers, AI-assisted test case generation
- Domain: Dental Healthcare Software, Document & Business Process Management

WORK EXPERIENCE

Software Development Engineer in Test Co-op

Henry Schein One | Exan | Sep 2025 – Aug 2026

- Conducted manual, regression, automation, and performance testing for desktop, web and mobile applications.
- Built an automation framework from the ground up with the team using Playwright and TypeScript, leveraging AI-assisted Cursor agents to accelerate framework development.
- Developed 40+ UI automation tests, improving manual test execution efficiency by 40% and reducing repetitive testing effort.
- Designed and executed manual and API test cases using Postman to validate authentication endpoints for desktop applications against user stories and business requirements.
- Leveraged MCP servers and Cursor AI to generate API and manual test cases and integrate them with Jira, streamlining test case creation and reducing manual effort.
- Investigated and reproduced production defects through end-to-end UI/API validation, performed root-cause analysis, and verified fixes to ensure application stability.
- Collaborated with cross-functional teams and participated in Agile ceremonies throughout the software development lifecycle.
- Used GitHub for version control, code collaboration, and test automation development.

Sr. Software Test Engineer

Newgen Software Technologies Limited | Jan 2021 - July 2023

- Developed, documented, and maintained 300+ test cases, participated in their execution, detected bugs, overall improving team efficiency by 40%.
- Led a team of 5 testers, providing guidance on API testing best practices and tools while conducting API security testing and test automation using Postman.
- Developed 10+ automated test cases using Selenium, Java, and TestNG with the Page Object Model (POM), enhancing test reusability and reducing repetitive manual testing effort.
- Performed accessibility testing against WCAG 2.0/2.1 Level AA guidelines to improve web application accessibility and compliance.

- Conducted security testing on web applications using Burp Suite, identifying vulnerabilities such as cross-site scripting (XSS) and improving application security.

Quality Analyst

Newgen Software Technologies Limited | Jan 2019 - Dec 2020

- Executed 1,000+ functional and regression test cases, identifying and tracking defects using Jira and Bugzilla.
- Conducted cross-browser, cross-platform, and integration testing for banking applications involving Microsoft Office Suite and SharePoint.
- Collaborated with developers to troubleshoot and resolve defects, contributing to a 40% reduction in bug-related delays and a 30% improvement in code quality across Agile and Waterfall environments.

TECHNICAL PROJECTS

OpenCart Automated Testing Framework

- GitHub: <https://github.com/TechwithAyushi/ShoppingCartAutomation.git>
- Built a scalable UI automation framework using Selenium, Java, TestNG, and Page Object Model (POM) for critical e-commerce workflows including login, product search, cart, and checkout.
- Implemented data-driven testing with Apache POI and Excel to improve test flexibility and reusability.
- Configured Docker-based Selenium Grid for parallel cross-browser test execution.
- Integrated Jenkins CI/CD to automate test execution with application builds.
- Technologies & Practices: Selenium, Java, TestNG, Maven, Docker, Selenium Grid, Jenkins, POM, Data-Driven Testing

EDUCATION

Master of Engineering

University of Victoria | Victoria, BC | Jan 2024 – Sept 2026

CERTIFICATIONS

- Learning Playwright by LinkedIn Learning
